

Instructions for Downloading MT4 Expert Advisors, Indicators, Scripts & Templates

These are generic instructions. The files shown in the examples may be different that the files you are downloading. The Expert Advisor (EA), Indicator, Script or Template file(s) to be downloaded is/are contained in a **.zip** file. The downloading procedure for these MT4 files is the same, but the final destination for the individual files within the .zip file is different.

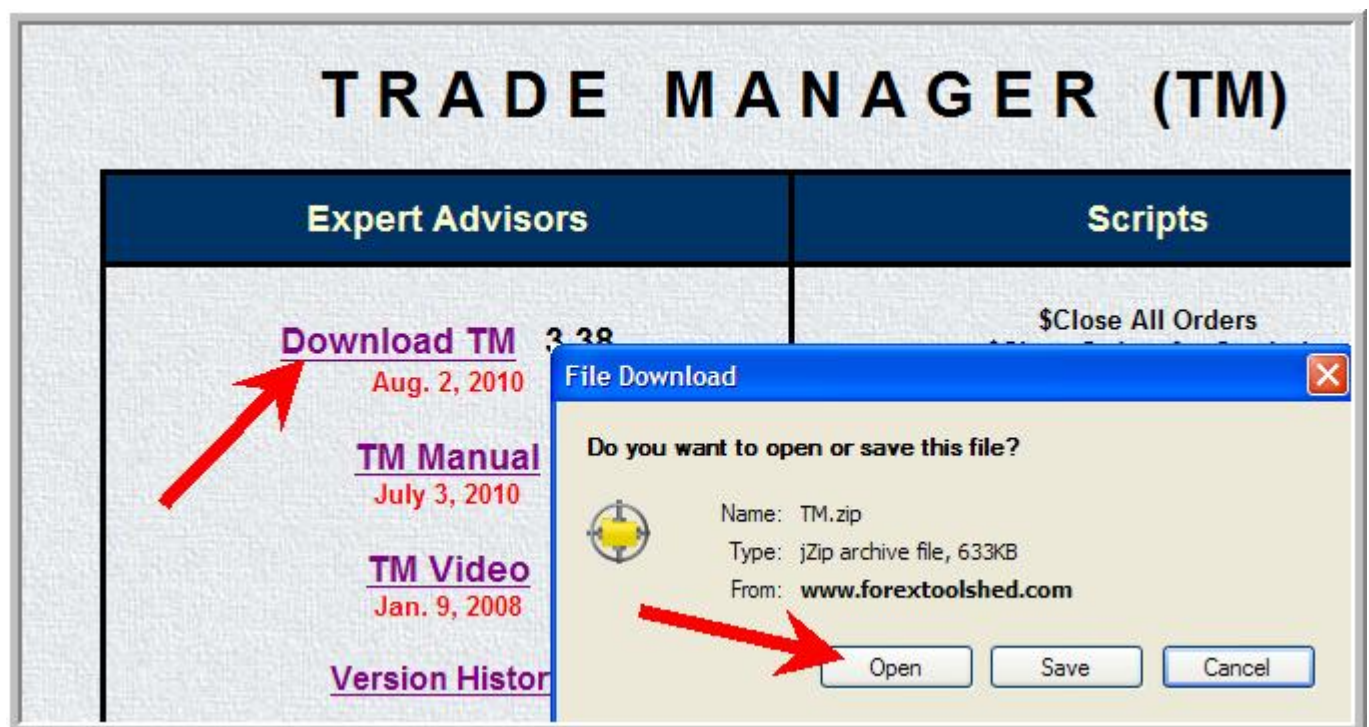

- On the web page, click the link for the file you wish to download, and then click on **Open** in the pop-up window that appears.
- Another pop-up Explorer window will appear which will allow you to extract the files contained within the .zip file. Extract the files into the **C:\ Program Files\MT4 *brokername*** folders as follows:

\$Script.ex4: Move to **experts\scripts** folder
#Indicator.ex4: Move to **experts\indicators** folder
ExpertAdvisor.ex4: Move to **experts** folder
preset.set: Move to **experts/presets** folder
##Template.tpl: Move to ***brokername*\templates** folder

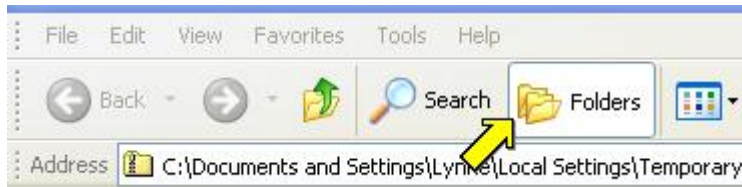

Note: The prefix of \$, #, and ## is a TeamForex convention to indicate whether a file is a script, indicator or template.

The installation is now complete. In order to see the new EA, Indicator or Script within MT4, you will need to close and restart the MetaTrader4 platform. The following are examples.

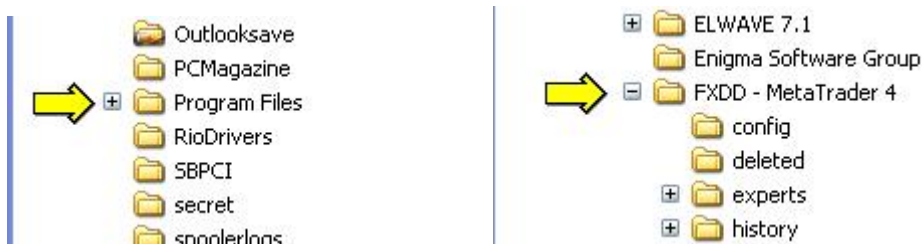

- Go to the web page and click the link for the EA, Indicator or Script you wish to download, and then click on **Open** in the pop-up window that appears.

- When the Explorer window opens you'll see the files contained within the .zip file.
- Click the Folders icon on the toolbar at the top to display all of your folders down the left side of the window.

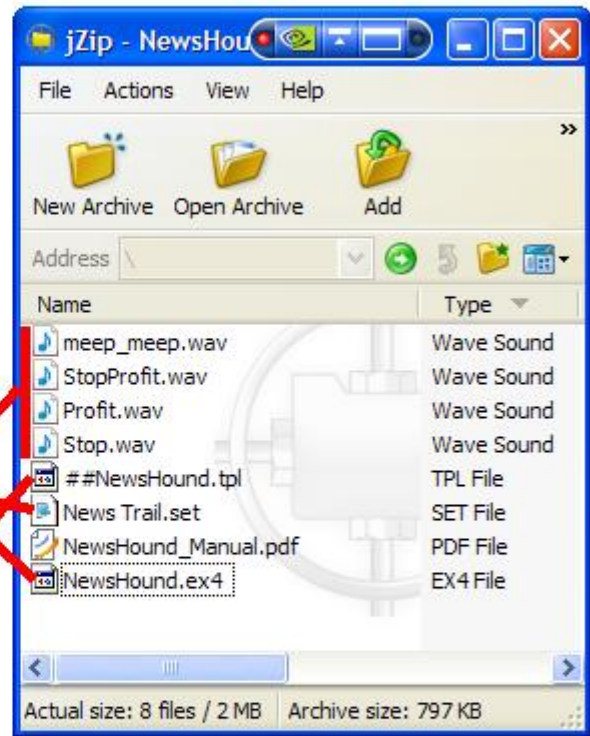

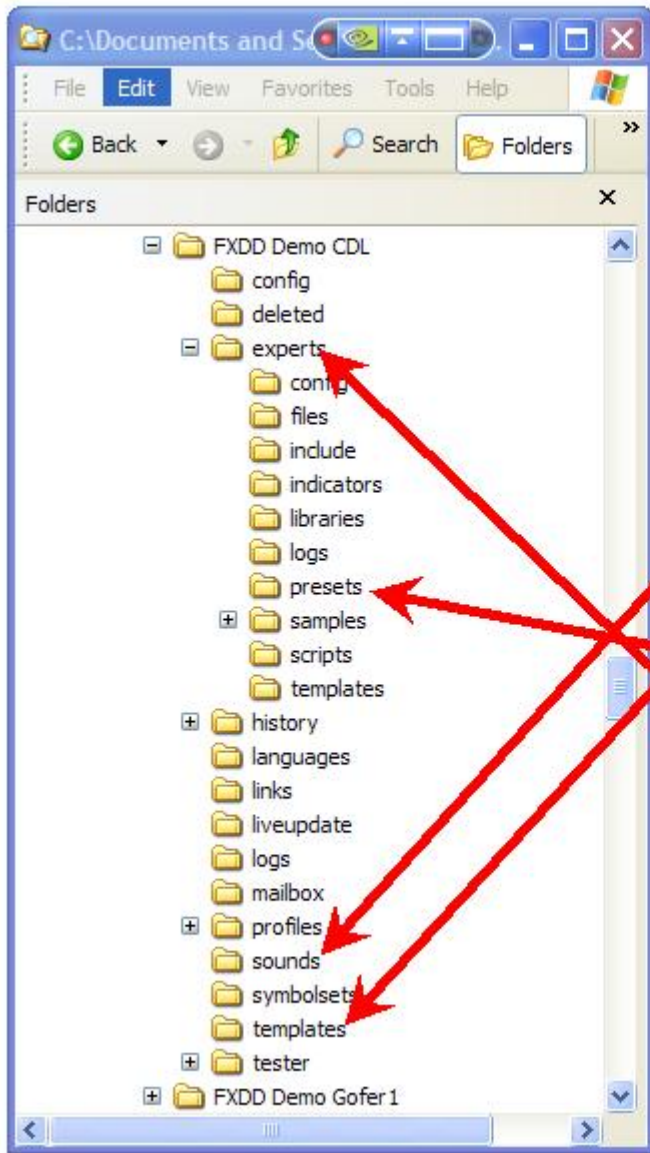

- Next, find and click the + sign to the left of the **C:\Program Files** folder, then scroll to find your **MetaTrader4** folder (example: FXDD - MetaTrader 4) and left click on the + sign by that folder so you can see the content of the folders.

(Note: If you can no longer see the files to be downloaded, you clicked on a folder name instead of the + sign. Use the back button to go back one page and try again).

- Holding your **Ctrl** key down, left click on each of the EA files to highlight them, then right click and select **copy**. Move your cursor over to the **experts** folder, right click on the folder and select **Paste**. The EA files are now in the experts folder. (You can also right click the files and drag them onto the **Experts** folder).
- Do the same thing for the other types of files, copying or dragging each type of file into the appropriate folder as follows:

\$Script.ex4:	Move to experts\scripts folder
#Indicator.ex4:	Move to experts\indicators folder
ExpertAdvisor.ex4:	Move to experts folder
preset.set:	Move to experts/presets folder
##Template.tpl:	Move to MT4platform\templates folder

- The installation is now complete. In order to see the new EA, Indicator or Script within MT4, you will need to close and restart the MetaTrader4 platform.
